

Title: Partner Rank

Team Members: Daniel Radding, Steffan Voges, Jenna Tan, Ryan Flynn

Demo Link: <https://www.dropbox.com/s/tris2j3sxp3w4g2/Partnerrank.mov?dl=0>

Idea: An application where students (with berkeley.edu accounts) can give reviews of other students based on their experiences as project partners.

Models and Description:

User

- has many given reviews:
 - reviews that this user has given about other users
- has many received reviews:
 - reviews that are about this user
- email
- all the fields implemented by devise

Lecture

- has many reviews
 - reviews are classified by lecture so that a reader can know what class a particular review pertains to
- has a display name that is used when information about the lecture is rendered
- has a year and a semester to distinguish it from other times the same class was taught

Review

- belongs to a Lecture
 - as before, more information for a reader when he/she knows what class the review pertains to
- belongs to a User
 - the person that gave the review, and...
 - the person that the review is about
- has an associated rating

Features:

- Users can log in
- Users can create lectures
- Users can create reviews
- Users can look at Reviews

Division of Labor:

- Steffan
 - Implemented models for user, lecture and reviews
 - Implemented controllers for user, lecture and reviews
 - validation for models
- Ryan
 - Implemented relationships between Users, Lectures, and Reviews

- Design of forms, including new Review form and new Lecture form
 - Implemented averaging of given and received reviews for each User and the view displaying this information
 - Individual User view
- Daniel:
 - Home page design
 - Index.html.erb for Users
 - Added and Implemented omniauth gem for facebook (works locally but not on Heroku)
- Jenna
 - Lecture views
 - Planning
